PROFESSIONAL SUMMARY

Computer Science Engineering graduate combining strong Java development fundamentals with a specialization in Cybersecurity, IoT, and Blockchain. Built a Zero Trust security platform integrating role-based access control, multi-factor authentication, and blockchain-based identity management — demonstrating both secure system design and structured, object-oriented problem-solving. Proficient in Core and Advanced Java, JDBC, MySQL, and Python, with hands-on exposure to Solidity smart-contract development on Ethereum. Completed a blockchain technology internship in decentralized application development.

TECHNICAL SKILLS

Programming: Core Java, Advanced Java (JDBC), Object-Oriented Programming (OOP), Python, HTML, CSS

Cybersecurity: Network Security, Cryptography, Ethical Hacking Basics, Zero Trust Architecture, RBAC, IAM, MFA

Databases: MySQL, SQL

Blockchain: Solidity, Ethereum, Smart Contracts, Hardhat, Ethers.js

Developer Tools: GitHub, Docker, VS Code, Vite, MS Office

PROFESSIONAL EXPERIENCE

Blockchain Technology Intern — Codec Technologies Pvt. Ltd. *May 2025 - Jul 2025*

Hybrid, India | AICTE & ICAC Approved Internship Program

- Completed a two-month internship focused on decentralized application development, applying structured software design and Solidity-based smart contract development on Ethereum.
- Collaborated on technical assignments and project deliverables under industry mentorship, strengthening documentation and problem-solving practices.

KEY PROJECTS

Zero Trust Cyber Security Platform

Personal Project

GitHub: github.com/MdAsadUddin-Anas-12/Zero-Trust-Cyber-Security-Platform- | Live Demo: zero-trust-cybersecurity-platform-o0g0qqq0-diigootasks.vercel.app

- Architected a Zero Trust security platform with modular, object-oriented design, enforcing continuous verification of users and devices and eliminating implicit trust.
- Implemented multi-factor authentication (MFA) and role-based access control (RBAC), and built a real-time threat monitoring dashboard for system visibility.
- Integrated Solidity smart contracts via Hardhat and Ethers.js for decentralized identity and access management, containerized with Docker and deployed on Vercel.
- Tech stack: React, TypeScript, Vite, Node.js, Docker, Hardhat, Solidity, Ethers.js.

Hacking Competition Smart Contract

Personal Project

- Developed an Ethereum smart contract in Solidity managing secure competitions with transparent participant registration and an automated, fairness-driven winner-selection mechanism.
- Built a supporting web interface in HTML, CSS, and JavaScript, integrating contract interactions via Ethers.js and testing through Remix IDE.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science Engineering *Graduated Jul 2026*

Specialization: Cybersecurity, IoT & Blockchain Technology

Nawab Shah Alam Khan College of Engineering & Technology, affiliated to Osmania University, Hyderabad | CGPA: 6.6
