PROFESSIONAL SUMMARY

Computer Science Engineering graduate with strong foundations in Core and Advanced Java, JDBC, and MySQL, backed by hands-on project experience building secure, full-stack applications. Demonstrated object-oriented problem-solving through the design of a Zero Trust security platform integrating role-based access control and blockchain-based identity management. Completed a blockchain technology internship focused on decentralized application development, and quick to apply structured, disciplined engineering thinking to backend and full-stack development problems.

TECHNICAL SKILLS

Programming: Core Java, Advanced Java (JDBC), Object-Oriented Programming (OOP), Python, HTML, CSS

Databases: MySQL, SQL

Software Engineering: Data Structures, Problem Solving, RESTful Concepts, Git-Based Version Control

Blockchain: Solidity, Ethereum, Smart Contracts, Hardhat, Ethers.js

Security Fundamentals: RBAC, IAM, MFA, Network Security Basics

Developer Tools: GitHub, Docker, VS Code, Vite, MS Office

PROFESSIONAL EXPERIENCE

Blockchain Technology Intern — Codec Technologies Pvt. Ltd. May 2025 – Jul 2025

Hybrid, India | AICTE & ICAC Approved Internship Program

- Completed a two-month internship building decentralized applications, applying structured software design and Solidity-based smart contract development on Ethereum.
- Worked through technical assignments and project deliverables under industry mentorship, strengthening debugging, documentation, and problem-solving discipline.

KEY PROJECTS

Zero Trust Cyber Security Platform

Personal Project

GitHub: github.com/MdAsadUddin-Anas-12/Zero-Trust-Cyber-Security-Platform-

- Architected a full-stack security platform with modular, object-oriented design principles — separating identity verification, access control, and monitoring into distinct system components.
- Implemented role-based access control (RBAC) and multi-factor authentication (MFA), applying structured logic for identity verification and permission management.
- Built a real-time dashboard with Recharts to visualize system health and security events, integrating frontend logic with backend data flows.
- Integrated Solidity smart contracts via Hardhat and Ethers.js for decentralized identity management, and containerized the application with Docker for deployment on Vercel.
- Tech stack: React, TypeScript, Vite, Node.js, Docker, Hardhat, Solidity, Ethers.js.

Hacking Competition Smart Contract

Personal Project

- Developed an Ethereum-based smart contract in Solidity to manage secure competitions, applying core programming logic for state management, validation, and fairness-driven winner selection.
- Built a supporting web interface in HTML, CSS, and JavaScript, integrating contract calls through Ethers.js and testing via Remix IDE.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science Engineering

Graduated Jul 2026

Specialization: Cybersecurity, IoT & Blockchain Technology

Nawab Shah Alam Khan College of Engineering & Technology, affiliated to Osmania University, Hyderabad | CGPA: 6.6
